

Mini Mappers

Four compass points

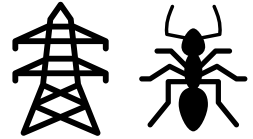

Geographers use these to give **directions** or to locate places.

Using scale

When geographers draw maps, they need to draw them to scale. This means:

- objects are drawn smaller or bigger than they are in real life.

Map symbols

Lines and **symbols** on a map represent real-life objects like roads, buildings, rivers and forests.

road

motorway

forest

river

visitor
centre

country
park

church

camp
site

Sch

school

caravan
site

building

- objects still look the same as they do in real life. They are just bigger or smaller.
