

Needs of Animals

To survive, all animals – including humans – need...

Food

Animals need to eat to grow, get energy to move, and repair.

Water

Animals get water by drinking and eating food. They lose it in sweat, urine and tears.

Oxygen

Some animals get oxygen by breathing air. Others get it from the water through gills.

The right temperature

Some like it hot, some like it cold!

To stay healthy, humans need...

...a healthy, balanced diet.

Our diet should contain all the nutrients our needs and be low in sugar, salt and fat.

...to practise personal hygiene.

Brush teeth
twice a day.

Change socks
and underwear
every day.

Wash hands
and bodies
regularly.

...to get enough exercise.

Exercise helps us maintain a healthy weight, makes our muscles and bones strong, and makes us sleep and feel better.

We should exercise for 60 minutes a day.
